SELENIUM WEB UI AUTOMATION TESTING REPORT

JavaScript | Selenium WebDriver

Report Detail	Information
Prepared by	Tanny Rajbangshi
Course	Software Quality Assurance (SQA)
Application	DemoQA
Environment	Windows, Google Chrome, Node.js

1. Objective

To automate two basic web UI scenarios using Selenium WebDriver and verify the expected application responses.

2. Test Summary

ID	Test Scenario	Expected Result	Status
TC-001	Text Box Submission	Submitted name is displayed	Confirm after execution
TC-002	Double-Click Button	Double-click confirmation is displayed	PASS

3. Test Environment & Preconditions

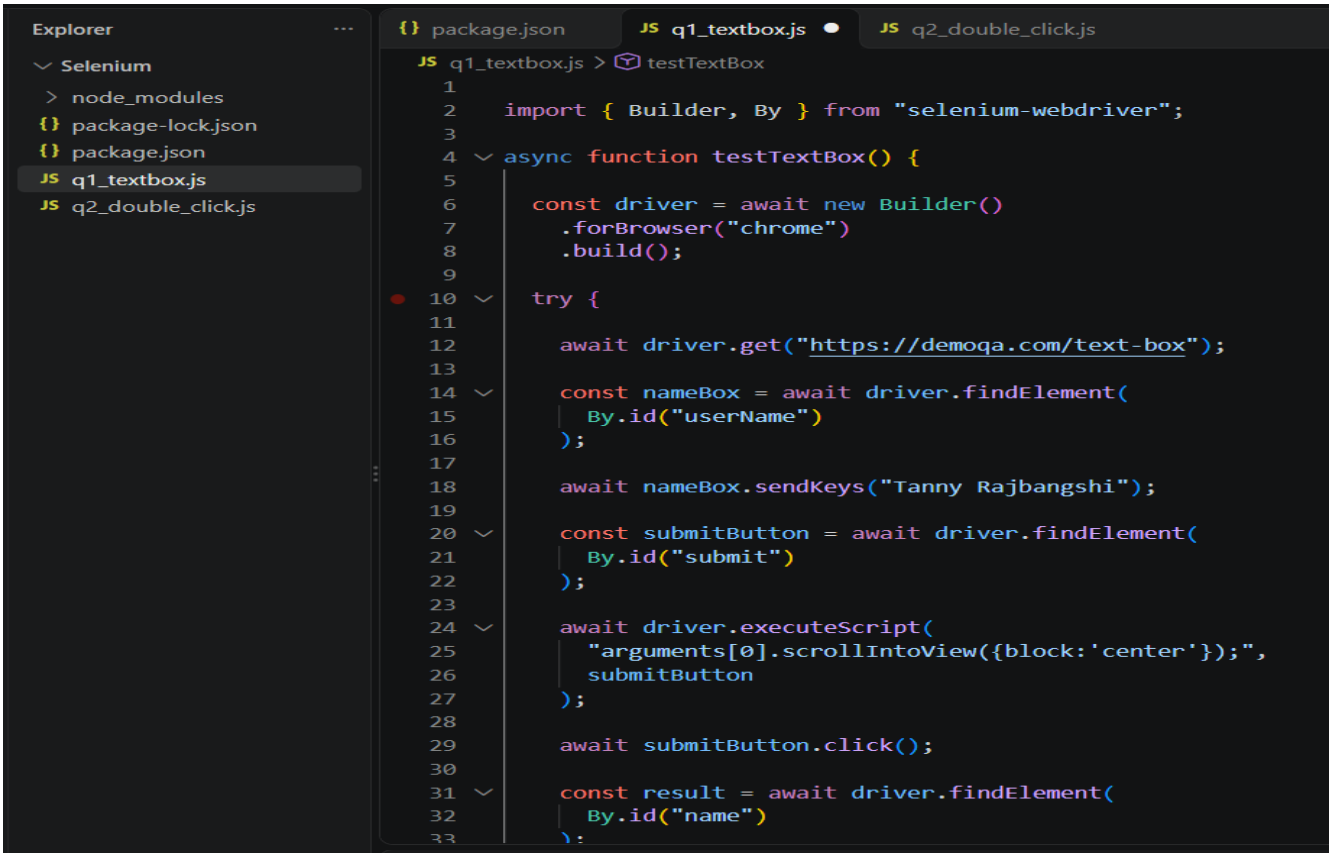

Node.js and selenium-webdriver are installed; Chrome is available; the DemoQA pages are accessible.

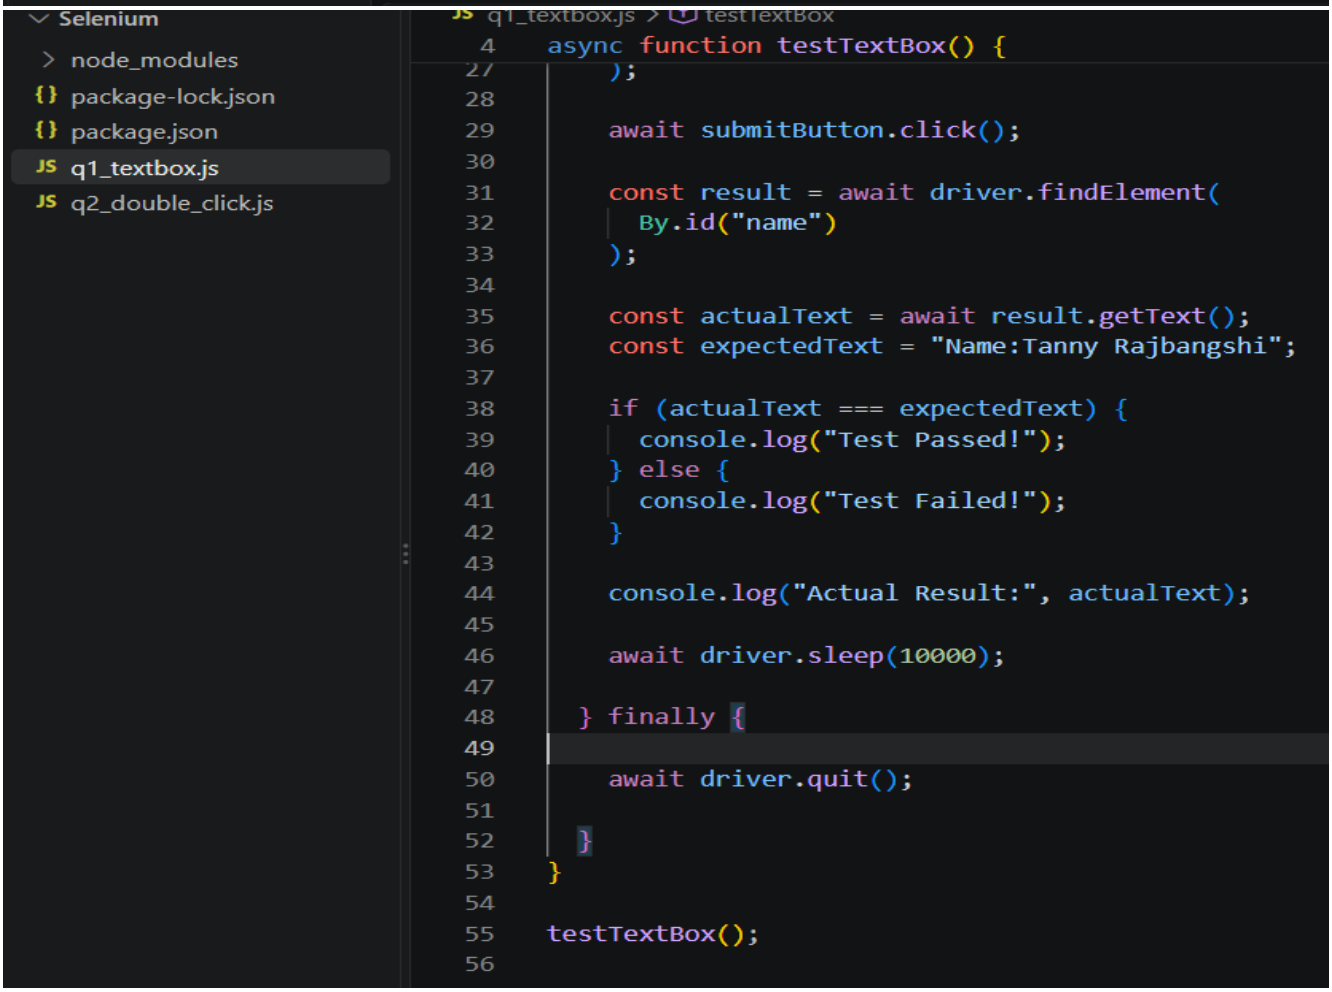

Test Case	URL	Run Command
TC-001	https://demoqa.com/text-box	node q1_textbox.js
TC-002	https://demoqa.com/buttons	node q2_double_click.js

4. TC-001 — Text Box Submission

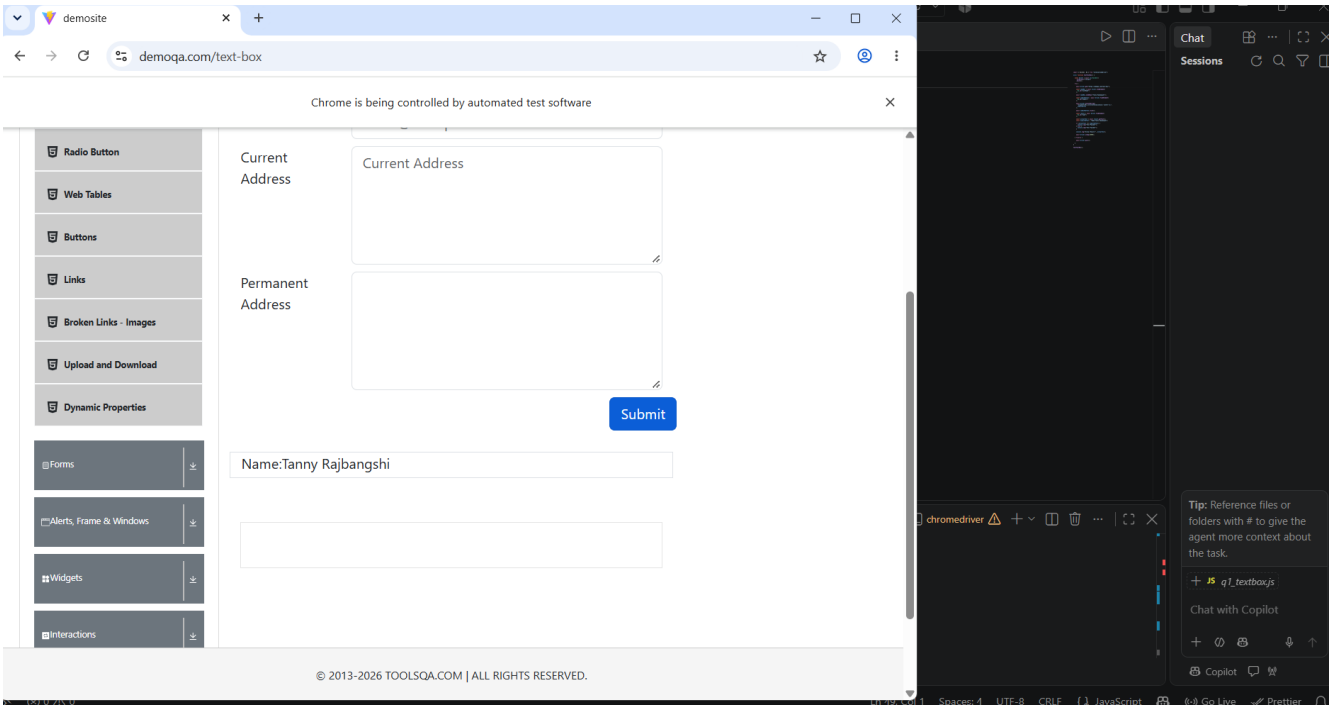

Objective: Enter a name, submit the form, and verify the displayed output.

Test Data	Expected Output
Tanny Rajbangshi	Name:Tanny Rajbangshi

Explorer
Selenium
node_modules
package-lock.json
package.json
q1_textbox.js
q2_double_click.js
package.json
q1_textbox.js
q2_double_click.js
q1_textbox.js > testTextBox
import { Builder, By } from "selenium-webdriver";
async function testTextBox() {
const driver = await new Builder()
.forBrowser("chrome")
.build();
try {
await driver.get("https://demoqa.com/text-box");
const nameBox = await driver.findElement(
By.id("userName")
);
await nameBox.sendKeys("Tanny Rajbangshi");
const submitButton = await driver.findElement(
By.id("submit")
);
await driver.executeScript(
"arguments[0].scrollIntoView({block:'center'});",
submitButton
);
await submitButton.click();
const result = await driver.findElement(
By.id("name")

Selenium
node_modules

```

5. TC-002 — Double-Click Button

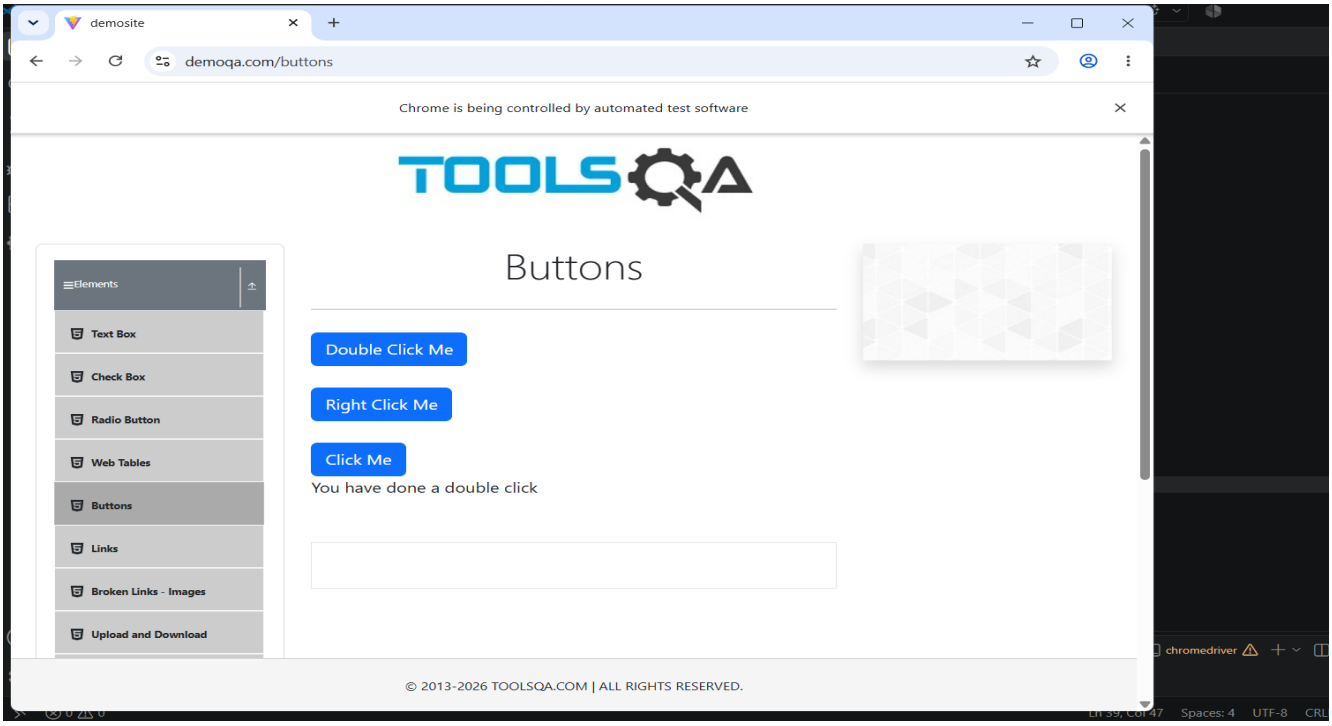

Objective: Double-click the target button and verify the confirmation message.

Expected Output	Actual Output	Status
You have done a double click	You have done a double click	PASS

6. Conclusion

Both Selenium automation test cases were designed to validate essential web UI interactions. TC-002 passed successfully, and TC-001 will be confirmed after execution. These tests demonstrate the use of JavaScript and Selenium WebDriver for basic functional testing.
